

PROFESSIONAL SUMMARY

Software Developer with 3 years delivering web applications that improve performance and user responsiveness. Proficient in Python, Django, Django REST Framework, MongoDB, MySQL and modern tooling (Git, BitBucket, VS Code, POSTMAN, JIRA), with a track record of writing testable code and coordinating cross-functional testing to reduce defects. Focused on applying full-stack skills to build efficient, scalable features while continuing to expand expertise in backend APIs and performance optimization.

EMPLOYMENT HISTORY

- SOFTWARE DEVELOPER
Sep 2022 - Present
- Cydez Technologies
- Collaborated on web application features across the SDLC, delivering measurable performance gains. Implemented front-end and back-end enhancements that improved user responsiveness and reduced load times. Wrote and maintained clean, testable code to support deployments and reduce defect rates.
- Coordinated requirements and testing with stakeholders to resolve functional issues before release.

EDUCATION

BACHELORS OF COMPUTER APPLICATION

MES Collage, Nedukkandam
2019 – 2021

DJANGO FULL STACK DEVELOPER

Aspire IT academy
Mar 2022 - Sep 2022

TECHNICAL SKILLS

- Python,
- Django,
- Django REST Framework,
- Flask Framework,
- HTML/CSS, JavaScript,
- Git,
- GitHub,
- BitBucket,
- POSTMAN,
- MySQL,
- MongoDB,
- Angular,
- JIRA,
- VSCode,
- Pycharm

PROFESSIONAL EXPERIENCE

EDU MANAGEMENT ERP

- Developed a student management system using Django(core) and Flask(microservices), with an Angular frontend and PostgreSQL database.
- Built scalable microservice architecture for modular functionality. Designed RESTful APIs for smooth data flow and user management. Implemented secure authentication and optimized data queries

RECRUITMENT APP

- Developed a recruitment management platform using Django, designed to streamline and automate the hiring process for businesses of all sizes .The system simplifies candidate management, enhances recruiter efficiency, and provides a seamless experience across the recruitment lifecycle.
- Built and integrated Django-based modules for candidate registration, job postings, and application tracking. Implemented user authentication and role-based access for administrators, recruiters, and applicants.
- Optimized backend workflows to improve data handling and reduce response time.

JOB FAIR PLATFORM

- Built a virtual job fair platform using Django and Angular to help employers and job seekers connect online. Created modules for candidate registration, login,and dashboards.
- Added profile management so users can showcase skills and track applications.
- Focused on a simple interface and smooth user experience.

Vessel Management

- Developed a complete vessel management platform
- Supported vessel creation and updates
- Managed bookings and financial records
- Added MIS reports for better visibility
- Arranged employee data by vessel
